Systems Integration and Configuration

BUILD TO ORDER, EFFICIENTLY

Extron's unique approach to configure-to-order manufacturing results in lower costs, reduced inventory, and stronger IP protection. We can configure an existing base product, or build from components. Extron's flexible service model is the ideal choice for both low-volume/high-mix, or high-volume/low-mix orders. Our customers can securely monitor and manage the manufacturing process online and then fulfill global orders flexibly in real-time. Extron's experience base spans consumer electronics, network appliances, wearables, telecom equipment, storage devices, and more.
